

# MACH-DRIVE

## NanoEnergizer®

ENGINE PLATINUM CERAMIC COATING

# FAQ'S

## Frequently Asked Questions

ENGINE  
OIL  
ADDITIVE

### **Q1. What is MACH-DRIVE NanoEnergizer?**

MACH-DRIVE NanoEnergizer is an additive to be added to engine oil. MACH-DRIVE NanoEnergizer is a revolutionary platinum-coated nano ceramic material for easy restoration, repair and protection of engine.

### **Q2. Is MACH-DRIVE NanoEnergizer similar to engine oil?**

No, engine oil treatment basically provides an additional layer of lubrication between the engine cylinder wall and pistons for extra protection during engine usage. They do not coat or restore worn-out engine cylinders, whereas MACH-DRIVE NanoEnergizer gives platinum ceramic coating to engine and make engine almost new.

### **Q3. How does MACH-DRIVE NanoEnergizer improve fuel efficiency and combustibility?**

MACH-DRIVE NanoEnergizer contains platinum which is proven to improve combustion inside engine. Improvement in combustibility will indirectly improve fuel efficiency due to less wastages of unburned fuel.

### **Q4. How MACH-DRIVE NanoEnergizer restores & protects the engine?**

MACH-DRIVE NanoEnergizer, nano ceramic zirconium-coated with platinum is 20 times stronger and has a higher wear and heat resistance. MACH-DRIVE NanoEnergizer smoothens the engine walls by giving platinum ceramic coating.

### **Q5. Where to add MACH-DRIVE NanoEnergizer?**

MACH-DRIVE NanoEnergizer should be applied to the engine along with engine oil in any type of petrol, diesel or in CNG vehicles.

## **Q6. In how many kilometers, MACH-DRIVE NanoEnergizer creates coating?**

MACH-DRIVE NanoEnergizer creates coating in:

**Cars:** fully coated at 1,200 km

**Trucks/buses:** fully coated at 3,000 km

**Motorcycle (below 650cc):** fully coated at 400 km

## **Q7. Does MACH-DRIVE NanoEnergizer have any approvals?**

Yes. MACH-DRIVE NanoEnergizer has been extensively tested by various testing facilities, car manufactures/dealers and individuals, all of results are positive and proven effective.

## **Q8. Can I change engine oil after using MACH-DRIVE NanoEnergizer?**

Need to ensure that MACH-DRIVE NanoEnergizer has completed its coating cycle before you replace the oil. You only need to reapply MACH-DRIVE NanoEnergizer after every 30,000 km to maintain the optimum benefits.

## **Q9. How much MACH-DRIVE NanoEnergizer should be used in a vehicle?**

**Cars/Jeeps** = 1 packet (4Wheeler)

**Trucks/buses** = 2 packet (4Wheeler)

**Motorcycles** = 1 packet (2Wheeler)

## **Q10. How to apply MACH-DRIVE NanoEnergizer in my vehicle?**

**Step 1 :** Shake well MACH-DRIVE NanoEnergizer sachet before injection

**Step 2 :** Add one sachet of NanoEnergizer to engine oil which is sufficient for 30,000 km

**Step 3 :** Particle coating process is automatically completed by heat and pressure

**Step 4 :** No need for separate process to apply the coating and disassembling the engine

**Step 5 :** Injection dosage - 30 ml for 4 -10 engine oil capacity

## **Q11. Where to buy MACH-DRIVE NanoEnergizer?**

Buy directly from our website by visiting

<https://shop.myvestige.com/index.php/mach-drive/mach-drive.html>

Or through **Vestige POS app** 

You can also visit your nearest Vestige branch/DLCP/Mini DLCP
