Water Purifier Pitcher **WJ-100**

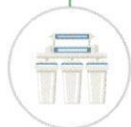

This pitcher purifies up to 1.5 litres of water* with five levels of filtration, removing all kinds of impurities and giving you pure and healthy drinking water on the go.

Benefits

Eases Persistent Water Problems

If the level of **Total Dissolved Solids (TDS) in the input water is less than 300**, or if you are drinking water directly from the tap, then this pitcher helps you in purifying such water. However, during monsoon, it is advised that water should be consumed after filtering it using the pitcher.

As an Add-on Water Purifier

It can further enhance the purity of filtered water, making it more bio-available and safe.

Portable

We do not get access to clean water always at public places or during trips. This pitcher helps ensuring hygiene on the move.

Environment Friendly

You may also keep it in your guest rooms, hotels and hospitals, replacing plastic bottles, thus lessening your carbon footprint on the planet.

*This pitcher should not be used for water with TDS level greater than 300.

Specifications

| Product | Service Life [^] | Flow Rate | Filtered Water Capacity |
|---------|---------------------------|-----------|-----------------------------|
| WJ-100 | 450 litres of water | 500ml/Min | 1.5 litres of input storage |

[^]Depends upon the water quality.

Five filtration stages

Mesh Pre-Filter

Removes rust, sand, sediment and other coarse particles.

Resin Layer-Softener

Reduces hardness. Also improves taste & aroma.

Dual Mesh Filter

This filter removes particles & impurities, and ensures there is no leakage in the filtration material.

Heavy Metal Remover

Eliminates heavy metals like lead.

Japanese Super ACF Filter

Eliminates chlorine, colour, smells, chloroform and improves taste.
